

PC-BOT: Remote Information, Security & Safety

-  Worried about your Mother?
-  Want to see what your children, pets or contractors are up to?
-  Want the comfort of a mobile sentry patrolling your house?

Stay in Touch with a Telepresence Robot

The PC-BOT from White Box Robotics lets you use telepresence to stay in touch with the people and things that matter to you. With cameras, wireless networking, speech, audio and many other functions, the PC-BOT is like a smart dog – you can see and hear through its eyes and ears, but it doesn't need to be fed or go for walks.

Traveling? Live alone? Have an elderly person you worry about? School kids home early? A telepresence robot is the next wave of security, safety and peace of mind.

TELEPRESENCE FOR THE HOME OR SMALL BUSINESS

With the proliferation of broadband internet and now broadband wireless capability, consumers are about to benefit from a new class of remote monitoring applications. Already, telecom companies are offering the capability to see through stationary webcams over cell phones or PDAs.

The PC-BOT establishes a new standard of functionality for telepresence with the elements of *MOBILITY, AUTONOMY AND CONTROL*.

MOBILITY: why have a camera in a fixed position? Instead, see through cameras mounted on a mobile PC-BOT and get any view of your home or small business.

AUTONOMY: PC-BOTs can be programmed to automatically patrol your premises and react to events such as: intrusion, fire or water leaks. Then call you if there is something that needs your attention.

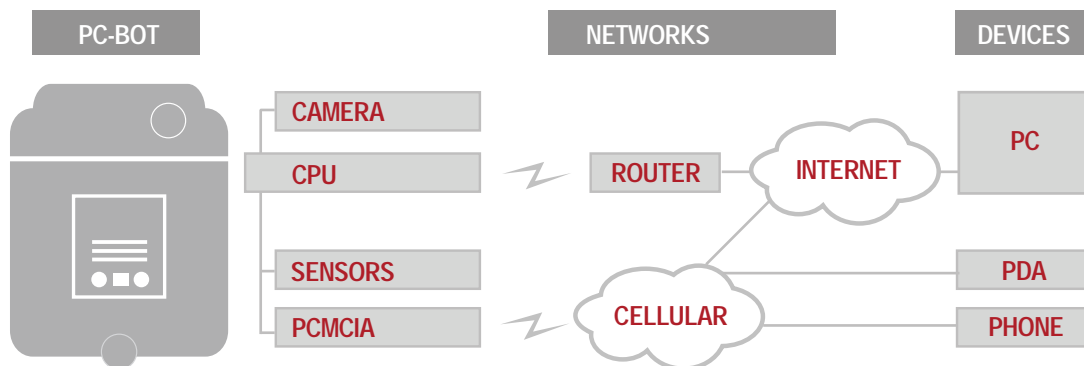

CONTROL: now you can drive your camera remotely by steering the PC-BOT and controlling the camera settings through an application running in a browser on your mobile device or hotel computer. Talk to people in your house through PC-BOT speakers. Program your PC-BOT to use your entertainment system to record an important program.

OPEN PC ARCHITECTURE MAKES TELEPRESENCE SERVICE AN AFFORDABLE REALITY

Existing off-the-shelf components and controllers plus into the PC-BOT to reduce development time for your mobile network. Use available PCMCIA cards and PC-based controllers for a complete systems implementation without new hardware. The PC-BOT can be readily supported by your existing channel technicians with a rudimentary knowledge of PC networking. The robots themselves are around the cost of a good PC. All of this adds up to a remarkably straight forward and affordable service offering.

PC-BOT SETS THE GOLD STANDARD FOR MOBILE TELEPRESENCE SIMPLICITY
