

iRobot Product Comparison

Which iRobot is right for you?

iRobot currently sells two different types of robots for your home: the iRobot Roomba Vacuuming Robot and the iRobot Scooba Floor Washing Robot. We often get the question, "If I buy a Scooba do I still need a Roomba?" The answer is yes. Just as you need a mop when you own a vacuum cleaner, Roomba and Scooba are very different robots that provide different services.

Scooba

Preps, washes, scrubs and dries your floors so you don't have to. Regular mopping just spreads dirt around: Scooba actually picks up the dirt so your floors are cleaner. You can use Scooba on most hard floor surfaces.

Roomba

Vacuums hard and carpeted floors. Its compact shape allows it to clean completely under beds and other furniture allowing them to clean more fo your floor than standard uprights. There are currently 4 different Room ba models. Compare their features and accessories below.
