

La robotique à votre service

Zucchetti Ambrogio robotic lawn mower Testimonials

Eric, Quebec Canada, October 23rd 2006

Everyone should enjoy the experience of Ambrogio, the "robotic" lawn mower. Hard to believe but, I gave away my regular lawn mower in the summer of 2005 and I've no regrets! Not only is Ambrogio impressive to watch, but this independent robot, as small as it looks, can offer advantages even more significant than a lawn tractor! The grass is cut so thin, that it leaves no residue after the job is done! Even after using Ambrogio for a year, it still makes my lawn look like a golf course! With Ambrogio, my lawn is cut with a programmed frequency, and my grass is always at the same level.

No more struggling to find a spot in your garage... practically noiseless, it will never bother your neighbors. It doesn't cause any pollution, and it functions with a rechargeable battery! Also, the model called "evolution" (which is the model I own), will find its own way back to its charger!

Thanks to Robotshop!

Martin, Victoria B.C. Canada

We had some difficulty understanding the instructions as they aren't written in a logical sequence. However the service we got from the supplier (Robot Shop) in Canada was superb. Once I understood what was necessary, the robot certainly lived up to its claims and my expectations. I would have no problem recommending it to anyone interested in buying one

GUIDO, Italy

I am an ex-Bank director and now I own a farmhouse in the hearth of Tuscany. I learnt about the lawn mower Robot Ambrogio in the year 2000.

At first, I was a little skeptical but then I was amazed by the Robot. I decided to buy it and to put it in one part in my garden.

I have got a Garden of about 4500 MQ and on Saturday I always spent 4 hours to cut and pick up the grass. In this way I was never able to spend some time with my

family. With Ambrogio not only did I solve my problem, but now all my family is so fond of it that this robot became part of the family.

I have recently bought another one, in order to cover automatically all my garden. I am enthusiastic with Ambrogio and I am resolute not to use a traditional lawn mower anymore.

RENATO, Italy

I am the actor Renato Pozzetto. I was amazed with the Robot Ambrogio and I decided to buy it in the year 2000.

At first I had some small problems because of the conformity of my garden, but I was so enthusiastic with the Robot and it was wonderful to see it working.

Persuaded by the object, I bought the new model Ambrogio Professional and I must say that it's wonderful. It works also when it's raining, it doesn't make any noise, it doesn't consume, it doesn't pollute. It's ideal for me. Thanks Zucchetti, for creating such an efficient object!

GIORGIO, Italy

They had told me about the Robots and I had seen the first Robots but I wasn't persuaded by them, until one day my neighbors bought a Robot Ambrogio and I laughed at him. However, during the months of June and July of the year 2002, my neighbors left on holidays and I cut my garden under the sun, angry because I couldn't go out. In the meanwhile I was watching my neighbor's Robot cutting the grass of his garden every morning, while he was out.

One morning I decided to abandon my lawn mower and I went to buy an Ambrogio Robot. Today I can leave as well without being worried about my garden. Ambrogio is wonderful.

WILLY, Belgium

One morning surfing the net I discovered Ambrogio and I was curious by its descriptions and characteristics.

At the same time I was amazed by the abilities of such a small object. Navigating the internet site I asked more information about it. Moreover, as I knew that I would have to go to Italy in Tuscany for a Holiday, the region where Ambrogio is created, I asked if I could go and see Ambrogio while it was working.

Persuaded by the demonstration and by its abilities I bought Ambrogio and now I can really say that it's a fantastic object. It's true that it's a Robot and that it does everything in a complete autonomy, but I often spend hours watching it. It fascinates me, to see that such a small object can cover such an area so big as my

garden. I'm really satisfied with Ambrogio.

THEO, Holland

I was fed up with mowing my garden and then getting rid of all the grass. One day I decided to buy a Robot and I took a small Robot with solar panels, but I had some troubles. The object was always having a rest and it didn't cut the grass. My neighbor had bought Ambrogio and he was satisfied with it. I decided to buy it too and to change it with mine, even if I was a little bit unsure because of the bad experience I had had with my old Robot.

Nowadays I can really say that I'm satisfied with my choice and I can advise it to all incredulous people. There is no doubt: it's an intelligent Robot and now all my neighbors envy my Robot. I believe that soon I won't be the only one who owns Ambrogio. I'm sorry because at the moment it seems to me to own something everybody envy. I can only say that it's fantastic and then I love its name so much that I call it Ambrogio "Mon amour"

Mr. PEETJAN, Holland

As you can know in Holland it often rains and mowing the grass is not always possible. I bought an Ambrogio and now I enjoy by looking at the way in which such a small Robot is able to cut the grass even while it's raining, without caring of the bad weather.

I'm a little jealous because my wife always speaks about Ambrogio when I come back home. She tells me what he did during the day. It seems to me to have got another child. Of course I'm joking, but I'm very happy with my Robot Ambrogio.

RENE', France

I have got two children and a nice wife I love. I have got a garden of about 2500 mq and I always had to mow at the weekend. They told me about Ambrogio the lawn mower Robot. I had a lot of doubts about its characteristics and moreover I was skeptical about this kind of article.

Today, after two years I must say that I couldn't do without Ambrogio anymore. It's quite, it doesn't pollute, it doesn't consume, it works when I decide it, I don't know what to want, I'm satisfied with Ambrogio.

PAULO, Portugal

I'm a nature lover and I respect the environment. I'm very fond of my garden. I bought Ambrogio and now I must say that my garden is improving. The cut of Ambrogio is exceptional. It seems to be incredible, but weeds with a large leave don't

grow up on it anymore. However the beautiful thing is that I always used to find in my garden some rats and now, since Ambrogio has been working there those have completely disappeared.

For this reason I think that not only is Ambrogio a lawn mower, but it is also a guardian. Its green color also respects the environment. I believe that everybody should buy a Robot with these characteristics. We would have less problems connected with pollution.
